York University***

Chronic Disease and Obesity:

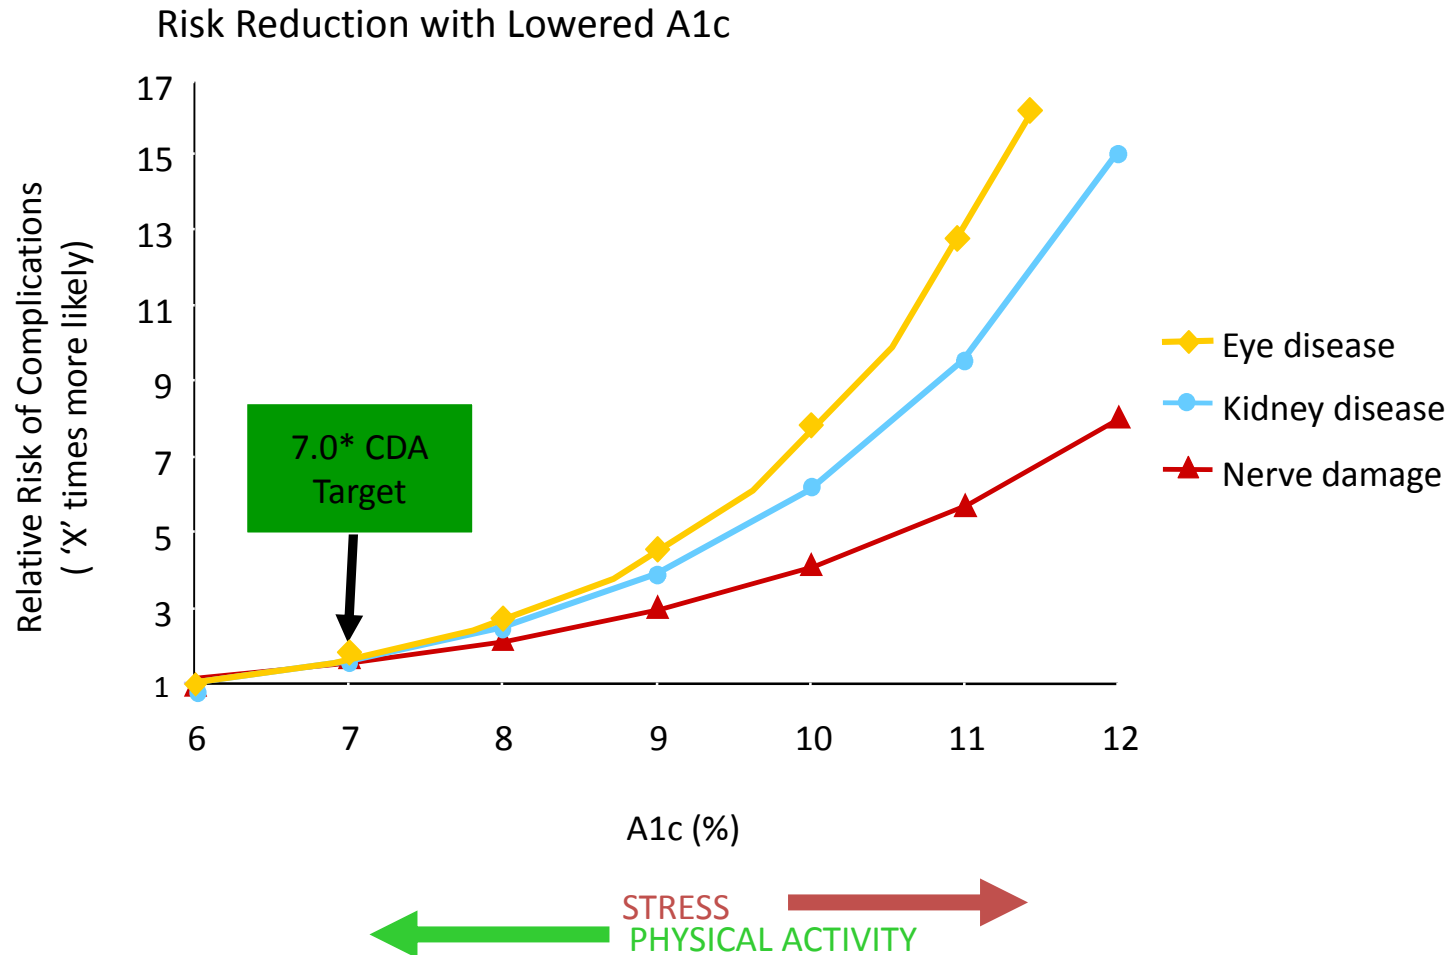

GLOBAL HEALTH ISSUES

Chronic conditions
leading cause
of death . . .

What is diabetes control and why should we care?

Adapted from DCCT Research Group: *N Eng J Med.* 1993;329(14):977-986.

* AACE recommends A1c \leq 6.5 (AACE Guidelines. *Endocr Pract.* 2007.13(Suppl):13-68.).

**Over 6.8 billion mobile device users globally!
But, can eHealth provide effective solutions?**

TODAY'S OBJECTIVES

- Describe the evolving concepts, use and evidence for Health Coaching: *why now?*
- Present some examples of Health Coaching using mobile technology and cloud computing: *great beginnings, but?*
- Critical Reflection: *what are the Pros and Cons of eHealth-mHealth for Health Coaching?*

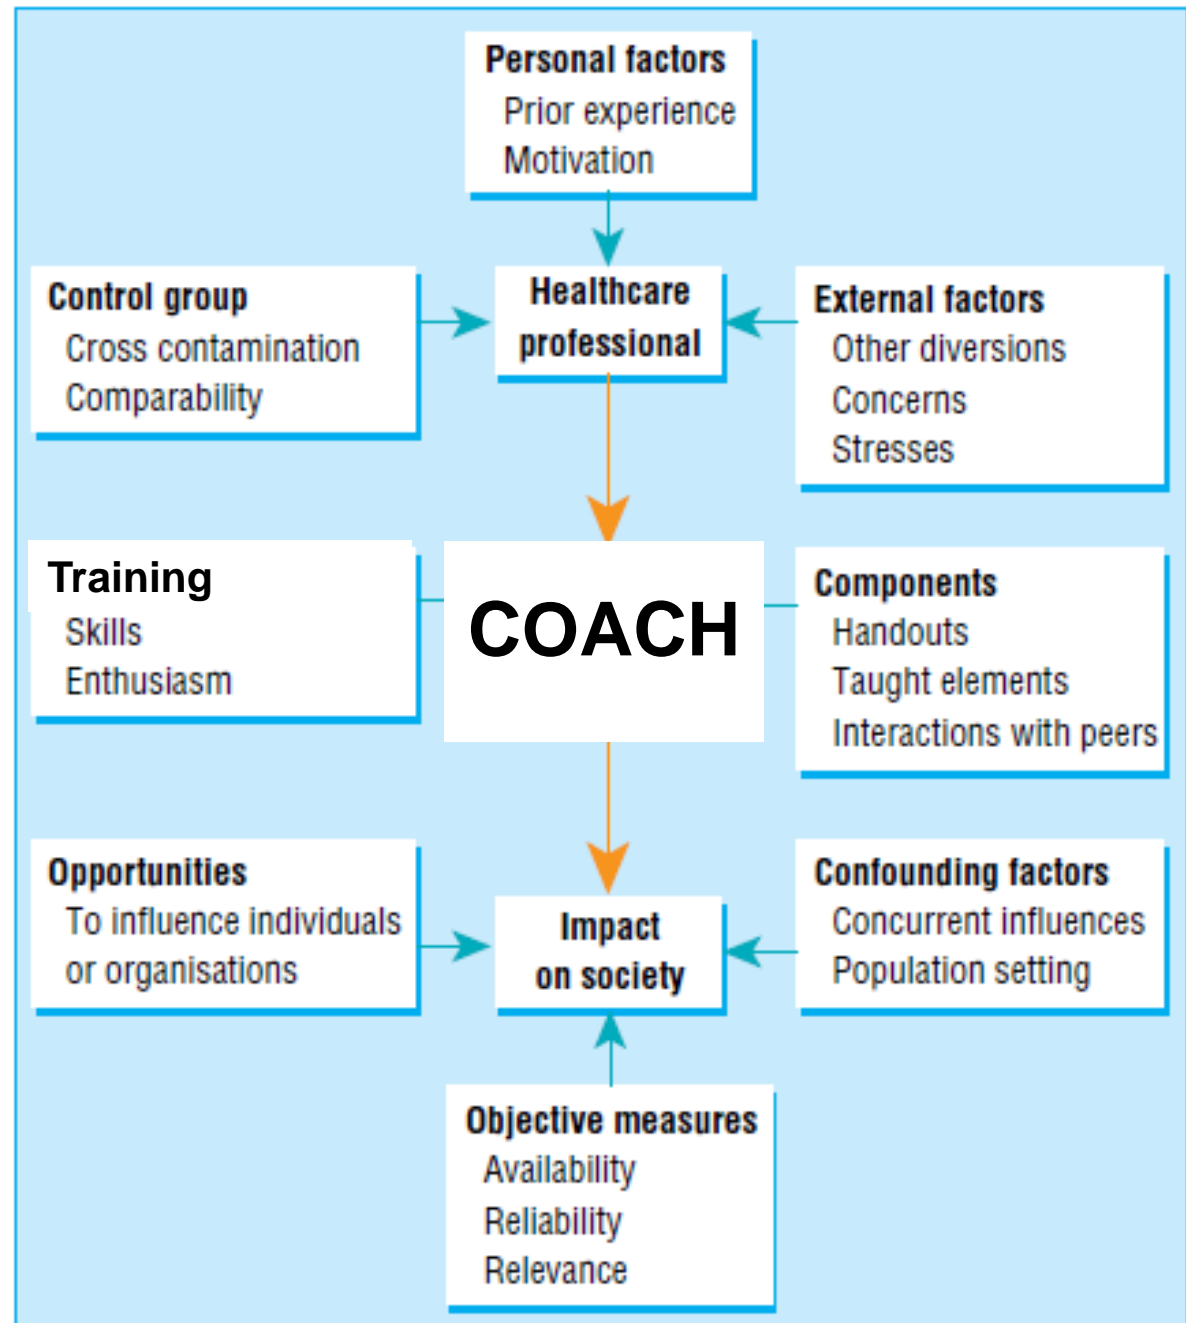

A word about *Coaching*?

- ✓ Health wellness or disease specific
- ✓ Comprises elements of health promotion, disease prevention and management/care/rehabilitation
- ✓ Variety of trained health care providers
- ✓ Offer support, facilitate learning (education), behaviour change, problem solving, advocacy, goal setting, etc.

Examples of potential factors that may influence effectiveness of coaching

*Adapted from
Hutchinson, BMJ 1999*

Diabetes Coach & Self-Care

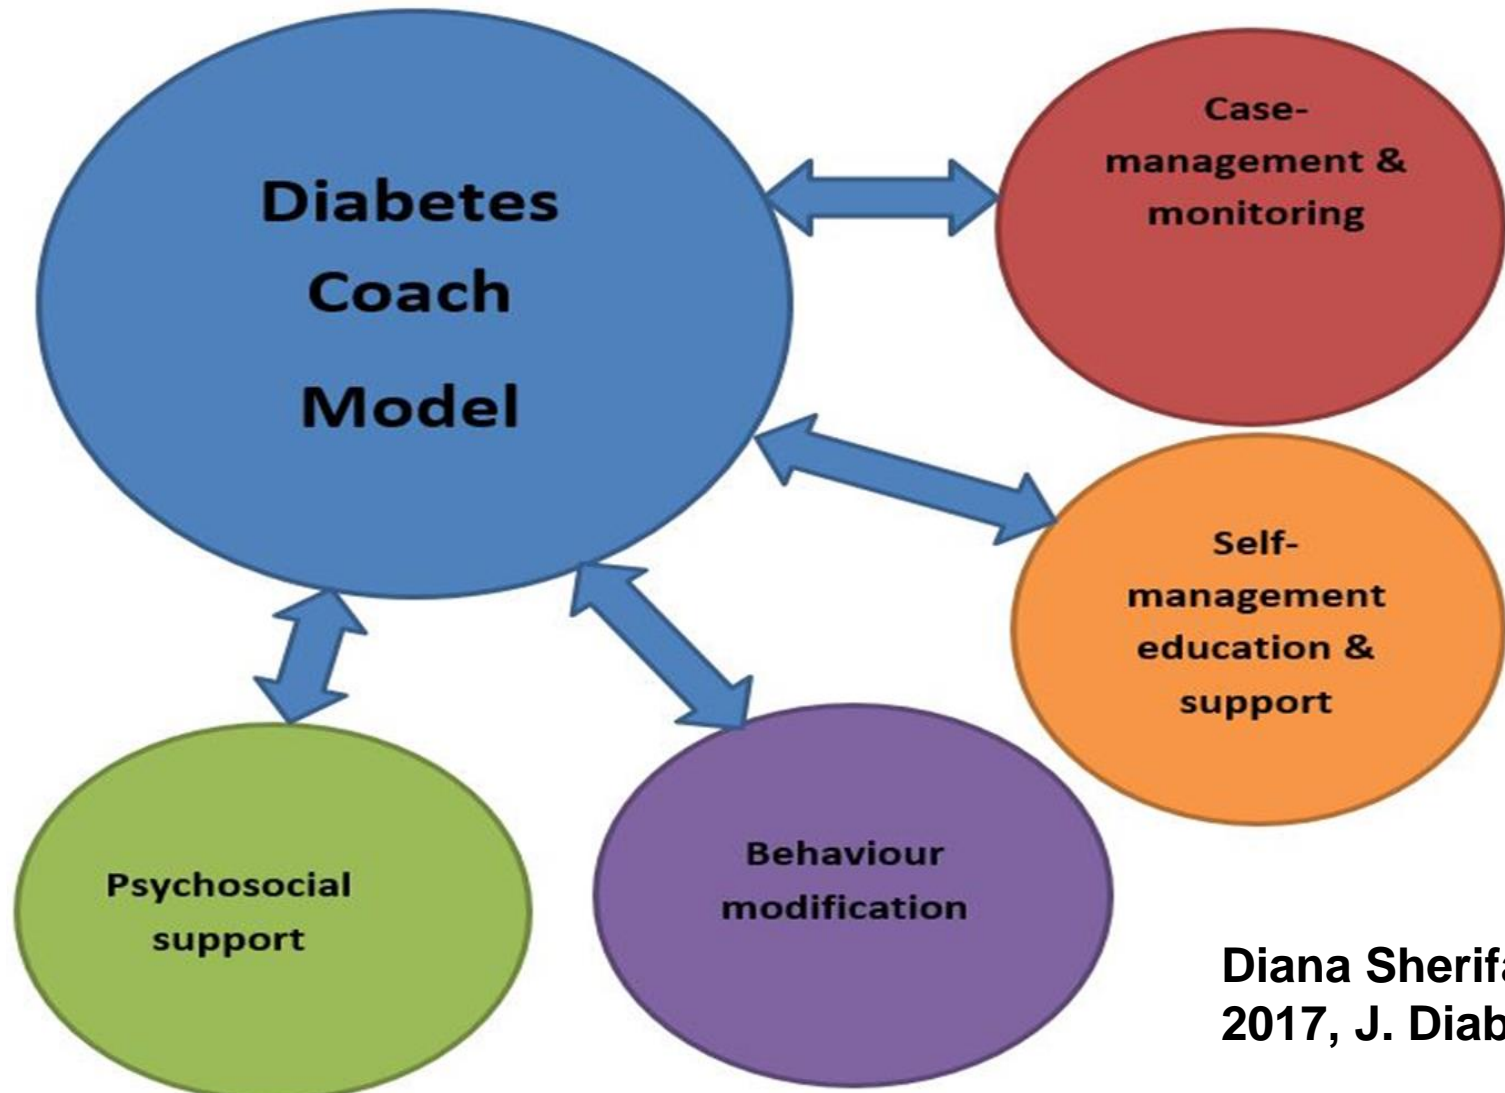

Diabetes Health Coaching Evidence

systematic review 8 trials to Jan 2015

- A growing body of evidence pertaining to health coaching for chronic conditions, including T2DM, suggest that individuals achieve better health outcomes with health coaching than with traditional education and support. Sherifali D. *Journal of Diabetes*, 2017.
- The pooled effect of health coaching overall was a statistically significant reduction of A1C levels by 0.32%. Longer health coaching exposure >6 months resulted in a 0.57% reduction. Sherifali D et al. *Can J Diabetes*, 2016;40:84-94.
- Only 2 of the 8 trials leveraged technology for coaching communication – prospects for the future?

Evidence Based Components of Health Coaching

Diana Sherifali
2017, J. Diabetes

Diabetes Coaching Essentials

Sherifali D. *Journal of Diabetes*, 2017.

- 1) Case management and monitoring
 - *process of care and system navigation*
- 2) Self-management education and support
 - *'just in time learning': knowledge, skills and problem solving*
- 3) Behaviour modification - motivational interviewing
 - *'not all behaviour change is equal': goal setting, reinforcement, behavior change and maintenance*
- 4) Psychosocial Support
 - *address social conditions and supports, manage distress, active listening and empathy*

Diabetes Coaching Triple Aim Framework

Sherifali D. *Journal of Diabetes*, 2017.

1) *Patient experience*

- quality of life
- beyond conviction, confidence, attainment

2) *Improving health of populations*

- Health promotion 'upstream determinants', prevention (primary, secondary), risk status, disease burden, premature mortality

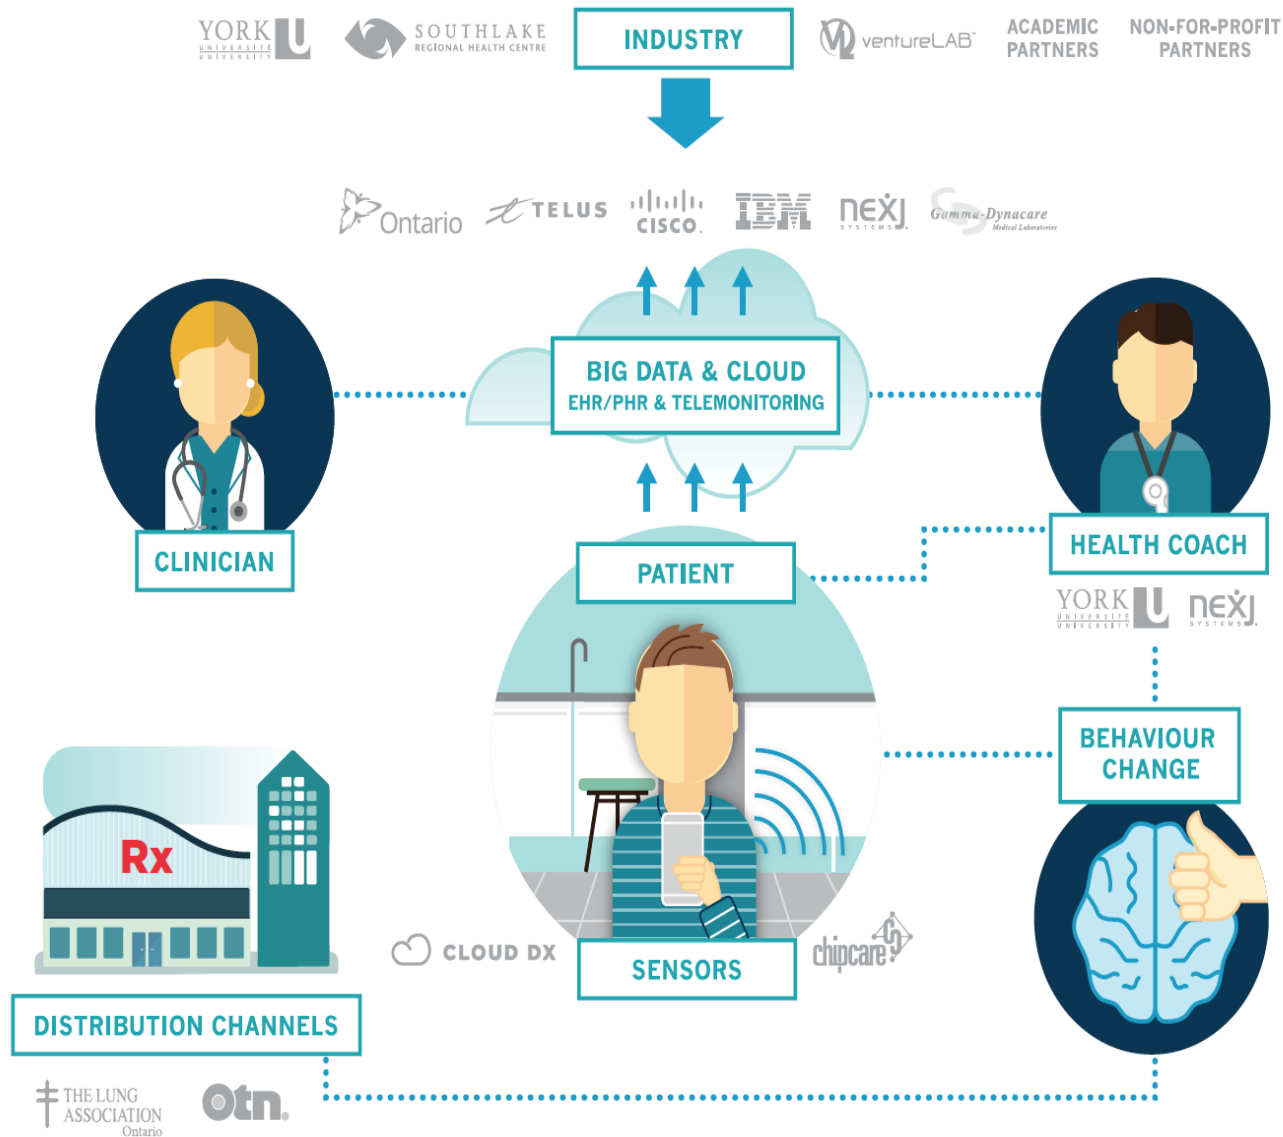

3) *Cost of Health Care*

- mitigate healthcare utilization
- foster self care and management: 'hidden healthcare system'

How I feel
Track: How I feel
Start Date: June 12, 2009
End Date: Dec 12, 2009
Short Instruction: Dear Ms. Gibson
Please track how you feel on a daily basis at least two times a day.
Daily Weekly Monthly
Alarm ON ☐
Remind me at 9:00 am, 11:00 am, 1:00 pm, 3:00 pm, 5:00 pm, 7:00 pm, 9:00 pm

Provider Portal

Physician prescribes personalized health metrics for patient to track condition.

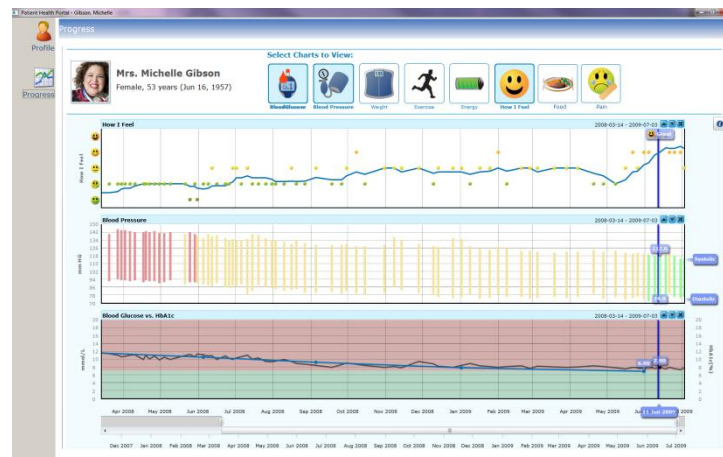

NexJ Health Coach

HIF
I feel great
Had a great day at work today!
1 Nov 2010 19:34

Meal
Notes
Portion Size (Small)
Source (Prepared)

Mobile Health Coach

Patient receives health coaching and records personal health metrics.

Patient Portal

Patient understands the relationship between their behaviour, bio-metrics, and how they feel. The patient becomes self managing through sustained behaviour change.

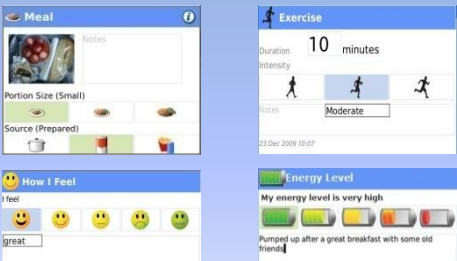

Health Coaching enabled by eHealth-mHealth

Type 2 diabetics given free BlackBerry (& data) pre-loaded with NexJ Health Coach

Culturally congruent instructional videos

Log diet, exercise, mood and energy

Health Coach monitors, prescribes plans & motivates via mobile or a secure portal

Daily secure communications & reminders via mobile

Blood Glucose – Weekly AVG

June 2011 – Oct 2011

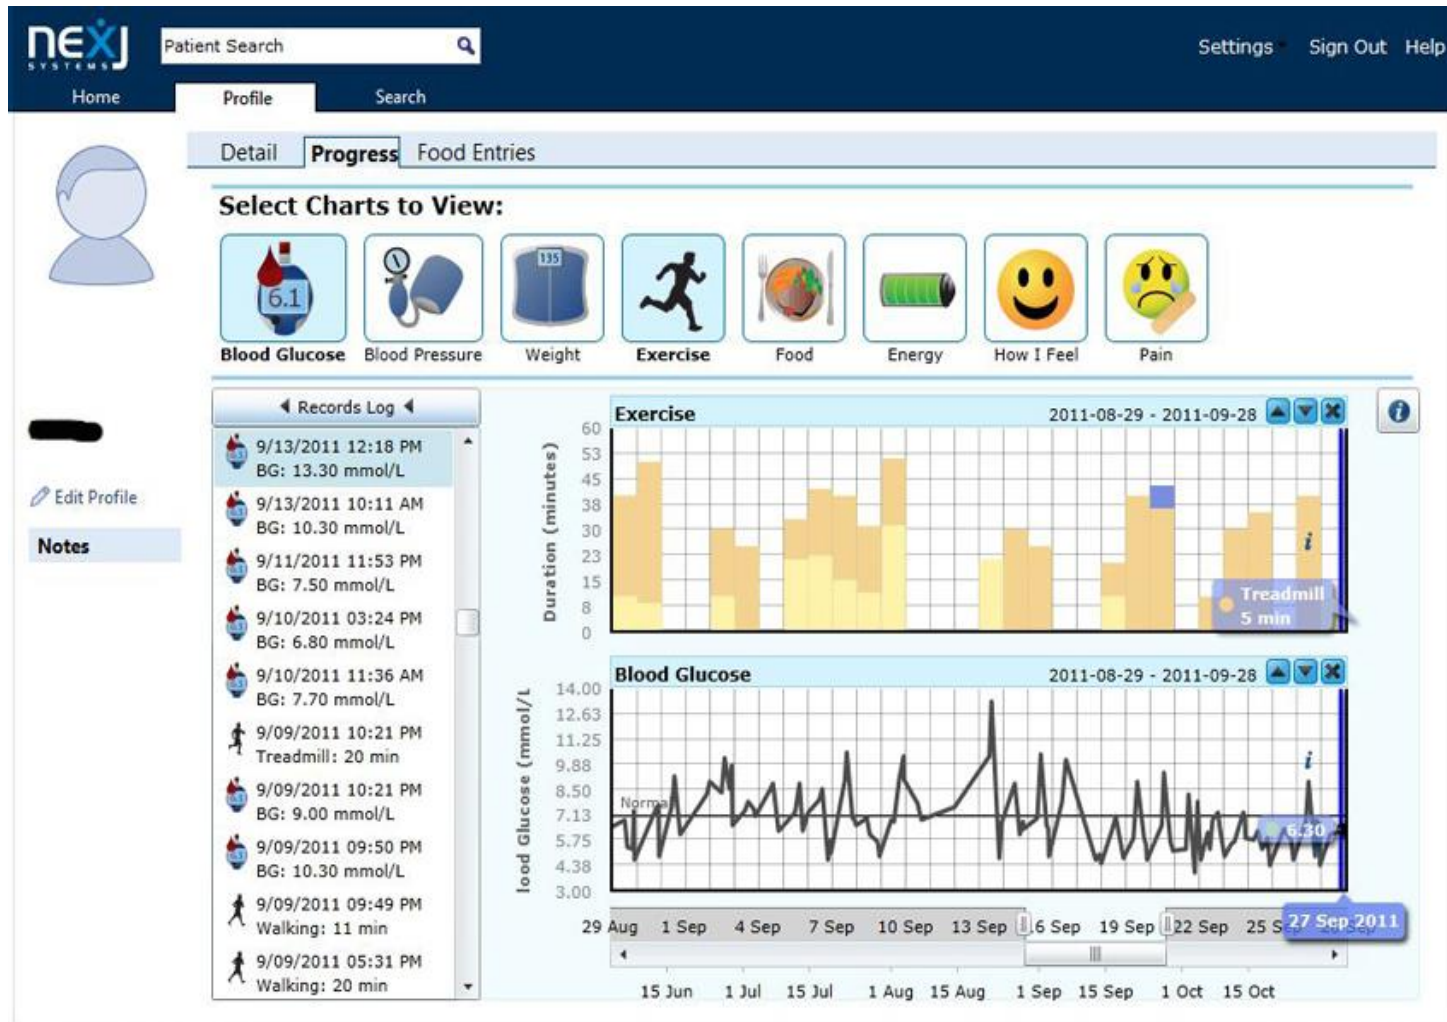

Radical reduction by week 4 results in physician reduction of Diamicron dose

Regulation then under more behavioural control

Exercise & Blood Glucose – Daily View

August 29 – September 26

Exercise increases to several sessions/ wk.

Death in family results in 3-day exercise gap & glucose spike, followed by *resumption & reduction*

Food View

October 16-19

The screenshot displays the 'Food View' interface of the NexJ Health Coach application. The top navigation bar includes the NexJ logo, a 'Patient Search' field, and links for 'Settings', 'Sign Out', and 'Help'. Below this, a secondary bar shows 'Home', 'Profile', and 'Search'. The main content area is titled 'Food Entries' and features a grid of food photos organized by date. The dates shown are Sunday, October 16, 2011; Monday, October 17, 2011; Tuesday, October 18, 2011; and Wednesday, October 19, 2011. Each photo is timestamped and includes a small icon indicating the meal type (e.g., breakfast, lunch, dinner). The interface also includes a sidebar with a user profile icon, 'Edit Profile', and 'Notes' buttons. A 'Trends' section is visible on the left side of the main grid.

| Date | Time | Food Item |
|-----------------------------|----------|------------------------------------|
| Wednesday, October 19, 2011 | 10:13 AM | Breakfast: Toast, cheese, milk |
| | 12:19 PM | Lunch: Salad, meat, vegetables |
| | 4:00 PM | Dinner: Fish, vegetables |
| | 8:17 PM | Snack: Fruit, yogurt, nuts |
| Tuesday, October 18, 2011 | 1:35 AM | Breakfast: Oatmeal, fruit |
| | 9:37 AM | Lunch: Sandwich, fruit, milk |
| | 2:35 PM | Dinner: Salad, meat, vegetables |
| | 2:47 PM | Snack: Banana |
| | 11:16 PM | Snack: Fruit, nuts |
| Monday, October 17, 2011 | 12:08 PM | Lunch: Sandwich, fruit, milk |
| | 3:46 PM | Dinner: Fish, vegetables, milk |
| | 9:24 PM | Snack: Fruit, nuts |
| Sunday, October 16, 2011 | 12:10 PM | Breakfast: Toast, fruit, milk |
| | 7:06 PM | Dinner: Meat, vegetables, potatoes |
| | 10:41 PM | Snack: Fruit, nuts |

Food pictures reflect healthier choices

Close up of Food

October 17 2011 – 9:24pm

The screenshot displays the Next Systems Health Coach web application. The top navigation bar includes the 'nexj' logo, a 'Patient Search' field, and links for 'Settings', 'Sign Out', and 'Help'. Below this, a secondary bar contains 'Home', 'Profile', and 'Search' tabs. The left sidebar features a user profile icon, an 'Edit Profile' link, and a 'Notes' section. The main content area is titled 'Food Entries' and shows a calendar view for the week of October 16-19, 2011. A large, prominent photo of a meal is shown, with a timestamp of 9:24 PM. The meal consists of a glass of brown soup, a white plate with chicken strips, and a salad of lettuce, carrots, and purple cabbage. Below the main photo, a timeline of other food entries is visible, with timestamps such as 12:10 PM, 7:06 PM, and 10:41 PM. The footer of the page includes the text 'Nexj Systems Inc. © 2003-2011' and 'About Nexj Health Coach'.

*Note: absence of simple carbohydrates & introduction of salad

Pilot Health Coaching – Diabetes

BLACK CREEK
COMMUNITY HEALTH CENTRE

Purpose

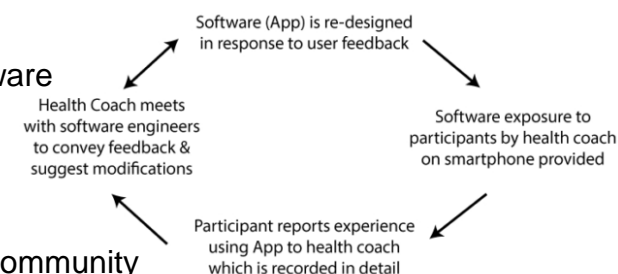

- ▶ To pilot test personal health coaching using NexJ Connected Wellness
- ▶ Intervention effects on glucose regulation, weight, waist circumference, BMI, depression, anxiety, mood, and quality of life
- ▶ Create innovative improvement cycle between deployment & software engineering

Pilot Single Arm Trial

- ▶ N=21 type 2 diabetic patients from a lower socioeconomic strata community
- ▶ Patients with type 2 diabetes at various levels of management
- ▶ Personal health coaching with NexJ Connected Wellness
- ▶ Behavioural focus on Exercise, Diet, Stress Management and Medication Adherence

Results

**Significantly
Lowered HbA1c in
Poorly Managed
T2DM**

**Innovation Cycle
Highly Effective at
Developing**

**High Satisfaction
with Intervention
(Low Attrition)**

Wayne, N., & Ritvo, P. (2014). Smartphone-enabled health coach intervention for people with diabetes from a modest socioeconomic strata community: single-arm longitudinal feasibility study. *Journal of Medical Internet Research*, 16(6), e149. <http://doi.org/10.2196/jmir.3180>

Health Coaching reduces HbA1c in Type 2 Diabetic Patients from a Lower-SES Community:

Randomized Controlled Trial

Journal of Medical Internet Research, 2015:17(10)

BLACK CREEK
COMMUNITY HEALTH CENTRE

- ▶ N=131 type 2 diabetic patients from a lower socioeconomic strata community
- ▶ Intervention and control groups both received health coaching, the intervention group also received NexJ Connected Wellness
- ▶ The intervention group showed a significantly sharper rate of improvement of HbA1c
- ▶ Pilot trial results, qualitative user experiences, and data mining of behavioral tracking available in sister publications

Improved Results with NexJ Connected Wellness

**Significantly
Lowered HbA1c in
Half the Time**

**Significant decrease
in Weight & Waist
Circumference**

**Improved Mood,
Satisfaction with
Life, Quality of Life**

Participant experiences in a smartphone-based health coaching intervention for type 2 diabetes:

Qualitative Inquiry

Journal of Telemedicine and Telecare, 2016:22(3)

BLACK CREEK
COMMUNITY HEALTH CENTRE

- ▶ 'I liked sending all the information to my health coach. I didn't have to tell her' (Pt. #11, HbA1c: -2.0%)
- ▶ 'I could just take a picture ... a visual record of what I have eaten' (Pt. #1, HbA1c: -0.6%)
- ▶ 'It was a helpful reminder of keeping a check on my blood...what I eat...what I shouldn't' (Pt. #4, HbA1c: -1.1%)
- ▶ 'I think this study helped me emotionally a lot, more than physical, I feel emotionally happy. That is important to me' (Pt. #9, HbA1c: -0.4%)

"It was like the doctor looking at you. I have to do this, I have to test my blood sugar, I have to test my pressure, how much exercise...Your meal, what you eat...you have this eye looking at you on the phone"

(Pt. #6 -HbA1c: +0.1%)

Lets Harness the Power of eHealth
Local to Global

Amber Fort, Jaipur

m-Health and Chronic Conditions in Rural India:

Note of Caution

- Qualitative study of type 2 diabetes and depression in two villages in rural Andhra Pradesh identified very different pathways to care for these medical conditions, where patients avoid or bypass the formal health system
 - **Diabetes:** is familiar (called 'sugar' or 'sugar disease') appears to carry little or no stigma – indeed, may be seen as a sign of modest affluence. Yet, treatment is unlikely to be sought in a recognized medical clinic
 - **Depression:** is deeply problematic and stigmatized. When individuals sought help they typically present with physical symptoms or sleeplessness – rarely admitting to any kind of mental distress
- Importance of healthcare outside the formal health system provided by 'registered medical practitioners' (RMP), who despite the title are neither registered or trained
- Ownership of phones did not translate (yet) into widespread use: basic phones, seasonally erratic electric supply, short battery life, limited use
- Promotion of 'self-management' may not be readily translated to a country like India as proponents of m-Health might assume.

Your Reflections ?
